

### Pediatric Gender Affirming Care

United General District 304 & Skagit Regional Health January 24<sup>th</sup>, 2023 6-7 pm

Matt Goldenberg, PsyD (he/him)
Psychologist
Seattle Children's Hospital Gender Clinic
Division of Adolescent Medicine

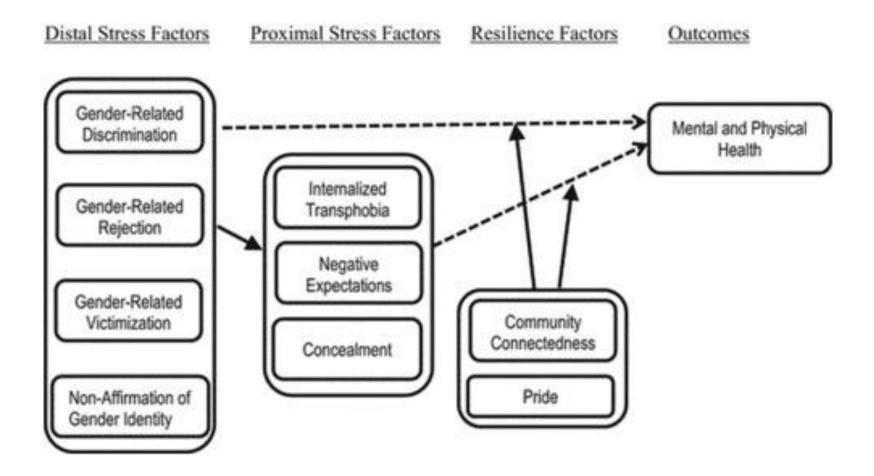

## Learning Objectives

- Create a clinic environment that is affirming to gender-diverse youth acknowledging the unique challenges and barriers that transgender and gender-diverse individuals may face in accessing healthcare.
- Effectively guide and support families through the referral journey to the Seattle Children's Hospital Gender Clinic including the procedural steps, objectives, and key timelines associated with facilitating a tertiary referral to the Clinic.
- Engage in open and non-judgmental communication with the families of transgender and gender-diverse individuals, addressing their concerns and providing educational resources.

#### Gender minority stress health model

### What is the gender affirmative model?

- (a) gender variations are not disorders
- (b) gender presentations are diverse and varied across cultures, therefore requiring our cultural sensitivity
- (c) to the best of our knowledge at present, gender involves an interweaving of biology, development and socialization, and culture and context, with all three bearing on any individual's gender self
- (d) gender may be fluid, and is not binary, both at a particular time and if and when it changes within an individual across time
- (e) if there is pathology, it more often stems from cultural reactions (e.g., transphobia, homophobia, sexism) rather than from within the child.

### Gender-affirming care options for youth

Social and emotional support

Pubertal blockers (GnRH analogs) Gender affirming hormones Surgeries (no repro/genital under age 18 in the United States)

To learn more, visit <a href="https://www.seattlechildrens.org/clinics/gender-clinic/patient-family-resources/">https://www.seattlechildrens.org/clinics/gender-clinic/patient-family-resources/</a>, "Resources to Support Gender-Affirming Medical Transition"

#### Legislative Tracking

- 2019- 2023 has seen an escalating amount of anti-trans bills proposed and passed each year. In 2023 so far, we have seen 83 anti-trans bills (covering 23 states) including:
- **22 Healthcare Bans** (Example: Iowa bans all gender affirming medical care for minors including puberty blockers)
- **20 Education Bans** (Example: Arkansas prohibits public school teachers from using a student's chosen name or pronoun without the parental consent)
- **8 Bathroom Bans** (Example: Florida requires use of public facilities that align with sex assigned at birth and encourages school districts to create conduct code for students who 'violate' the law)
- 12 Sports Bans (Example: Kansas prohibits transgender women and girls from playing on any women's/girls sports teams including at the high school level)

#### Impacts of legislation

- 2023 study in the Journal of Adolescent Health surveyed both medical and mental health providers who provide gender affirming care (117 participants) found: 70% were personally threatened or the site they work at was threatened. Due to this, providers describing needing to take on additional safety measures including in their personal lives, they described enduring emotional and psychological distress, they described increasing and unsustainable work loads and they describe re considering how/where they practice.
- 45% of trans youth (13-17) live in a state in which youth have lost access or at risk of losing access to gender affirming care
- 35% of trans youth (13-17) live in states that have already banned gender affirming care

### Trevor Project Youth (2022)

Transgender and nonbinary youth who attempted suicide in the past year, comparison across access to gender-affirming spaces

#### Harming behaviors

- Refusing to allow youth to participate in LGBTQ-focused activities such as diversity clubs at school, community-based support, and LGBTQ focused media like Trevorspace
- Blaming youth when others mistreat them because they are LGBTQ such as teachers unfairly punishing youth, siblings bullying youth, or social exclusion in the community
- Showing/sharing anti-trans media in the home with publications, radio, podcasts, or television shows
- Telling youth to accept bullying or misgendering from other family members or community members
- Denying medical care until an academic or behavior threshold is met
- Excluding LGBTQ friends from family life
- Threatening to remove economic or environmental resources if youth transitions
- Catastrophic/hopeless exclamations such as "You will never find love like that" or "This is going to ruin our family"
- Sending youth to conversion therapy or gender identity change efforts
- Assuming that medical gender transition is desired by all gender diverse people
- Assuming all gender diverse people who do receive gender medical care do so to achieve cisgender ideals

- Managing Misinformation
- Illusory truth effect suggests that people are more likely to believe claims as truer if they have encountered the same claim in the past
- People are more likely to believe claims if a photo is paired with the claim as visuals incite more emotional reactions
- Set the tone for your practices (compassionate care that is evidence-based)
- Appreciate that your skill and rapport with patients is based on how patients receive the environment you work in

### Family Acceptance Developmental Model

			· ·	•
Rejecting Punitive	Rejecting Non-Punitive	Qualified Acceptance	Full Acceptance	Advocacy
Rejection with significant consequences	Verbal and emotional rejection that has serious emotional consequences	Mixed or ambiguous statements that suggest acceptance for the person while rejection aspects of identity	Uncomplicated affirmation of a person inclusive of their identity	A parent that takes proactive steps to create more equity for their trans/queer child and the greater community
Ex: Forcing a child out of the home for being trans/queer	Ex: Auntie says you cannot come to the family dinner dressed "that way"	Ex: Parents saying 'I love you, but I do not approve of this lifestyle'	Ex: A parent that provides support for their child emotionally. Socially, economically, etc.	Ex: Parent corrects other family members and friends who misgender the child without conflict between the parent and child

#### Try:

- Motivational interviewing
- Psycho-ed
- Self-reflection with connection to story

#### Outcomes of non affirmation in families

Gendering youth appropriately contributed to 71% decrease in symptoms of severe depression and a 65% decrease in suicide attempts for transgender youth

-Family Acceptance Project

#### Healthy habits for LGBTQ family support

Talk with your child or foster child about their LGBT identity

Express affection when your child tells you or when you learn that your child is LGBT

Support your child's LGBT identity even though you may feel uncomfortable

Advocate for your child when he or she is mistreated because of their LGBT identity

Require that other family members respect your LGBT child

Bring your child to LGBT organizations or events

Connect your child with an LGBT adult role model to show them options for the future

Work to make your faith community supportive of LGBT members or find a supportive faith

community that welcomes your family and LGBT child

Welcome your child's LGBT friends and partner to your home and to family events and activities

Support your child's gender expression

Believe your child can have a happy future as an LGBT adult

-From Supportive Families, Healthy Children: Helping Families with Lesbian, Gay, Bisexual & Transgender Children by Caitlin Ryan, 2009, Family Acceptance Project, San Francisco State University

#### Best practices with gender diverse youth

- Ask what name and pronouns to use in front of parents/guardians
  Offer to facilitate a discussion with a patient and their parents/guardians about name and pronouns
- Ask about name and pronouns at every clinical encounter
- Obtain confidential contact information
- Ask patients to take a photo of resource lists/information
- Respect self-determination and make space for your patient to decide how to navigate issues around privacy
- Acknowledge how important it is to you to use their name and pronouns and respect them regardless of their choice around documentation in the EMR
- Limit exams and conversations to what is medically necessary and clearly benefitting solutions for the presenting problem
- Do not expect patients to undress unless they have consented and you have clearly articulated why undressing is necessary
- Offer blind weights/take weight only when it is necessary
- Use non-gendered language whenever/wherever possible

#### Services at Seattle Children's Hospital Gender Clinic

#### **Gender Clinic Roadmap**

#### **Adolescent Medicine**

### When to refer to SCH gender clinic

#### **Algorithm: Gender-Affirming Medical Care for Youth**

Is the patient interested in any gender-affirming medical interventions **YES** (such as puberty blockers, hormones or surgery)? NO YES Puberty started? Breast buds or testicle volumes 4 cc or greater medical care. **TANNER 2 or 3 TANNER 4 or 5** Early to mid-puberty Late or post-puberty NO "yes" pathway. · Puberty blockers may be an option Puberty blockers may still be beneficial in late puberty No medical intervention is to pause further pubertal progression for patients AFAB if <2 years post-menarche, or at any suppression if appropriate needed at this time.

- Monitor for puberty every 6 months with physical exam.
- · If exam causes significant dysphoria, labs can be used instead. Ultrasensitive pediatric LH and estradiol or total testosterone based on sex assigned at birth (ideally drawn before 9 a.m.). Ultrasensitive LH > 0.3 mIU/mL is consistent with puberty starting.
- Obtain baseline labs
- IF the patient is at least Tanner 2 on physical exam OR early morning ultrasensitive LH > 0.3 mIU/mL:
  - → Refer to Gender Clinic for further management OR learn more about management here (page 2).
- pubertal stage for patients AMAB.
- For AFAB patients, after menarche, menstrual suppression can help alleviate dysphoria for many patients. This is often started by PCPs and can be started before gender-affirming hormones. Learn more about menstrual suppression here (page 11).
- If patient is age 13.5 to 16 and interested in receiving gender-affirming hormones (such as testosterone or estradiol), obtain baseline labs and -> Refer to Gender Clinic for further management OR learn more about management here.
- If patient is age 17 or older, refer to an adult gender care provider (click here for some options).

#### Gender Clinic referral is not needed if patient is not interested in

- If the patient is interested but parents are unsure about medical care (or if patient and parents are unsure), please follow the
- Consider discussing menstrual

#### Provide social and emotional support.

- Additional resources for patient and family support, mental health support and nonmedical options for gender affirmation, including binding and tucking, can be found on our website:
  - https://www.seattlechildrens.org/clinics/gen der-clinic/patient-family-resources/
- Screen for depression, anxiety, and suicidality, and refer to a mental health therapist if there are any concerns, or for continued gender exploration. Please note: Gender Clinic does not provide long-term mental health therapy.

AFAB = assigned female at birth. AMAB = assigned male at birth.

### Project ECHO: Caring for Gender Diverse Youth

• Gender diverse patients face significant barriers to receiving adequate healthcare. The aim of the Seattle Children's Gender Clinic's Project ECHO is to increase participant knowledge and self-efficacy regarding best-practice care for gender diverse youth in order to improve the healthcare experiences of gender diverse youth and improve access to gender-affirming care.

We started this Project ECHO in 2022. Series I focuses on topics including affirming clinical environment, supporting families and schools, mental health, social transition, eating disorders, and neurodiversity. Series II topics include consent, gender dysphoria and euphoria, puberty blockers, menstrual suppression, masculinizing treatments, feminizing treatments, and supporting youth before surgery. Each series runs for 6 months with one lunchtime webinar session each month.

• We will be running Series II again in winter/spring 2024 on the 4th Monday of each month, except May which will be the 3rd Monday. Sessions will be held virtually on Zoom from 12:00-1:15pm Pacific time.

# Seattle Children's Gender Clinic Electronic Consultation (E-consult)

The Seattle Children's Gender Clinic (SCGC) has created a new way for community providers to get advice and support directly from our SCGC team. If your consult question is of a non-urgent nature (i.e. you are comfortable receiving a response from one of our SCGC providers within 3 business days), we encourage you to submit your question directly to us via our new e-consult order in EpicCare Link.

✓ Can only medical providers submit an e-consult?

No, any person who has EpicCare Link access can submit an e-consult (referral coordinators, office staff, MA's, nurses, therapists, medical providers).

✓ Are e-consults only for patients who are existing SCGC patients?

No, e-consults can be submitted for any patient under age 21, not just those who are already seen in the SCGC.

✓ How do I submit an e-consult to the SCGC?

The only way to request an e-consult is by putting in an order through Seattle Children's EpicCare Link. EpicCare Link is currently used by many community providers to submit referral and lab orders to Seattle Children's.

✓ Can providers who don't use Epic in their practice submit an e-consult?

Yes! All providers, regardless of what electronic health record they use in their practice, can use EpicCare Link.
